

BEVOGUARD

Tyre pressure monitoring from ROR

THE SYSTEM

The system monitors and automatically corrects the tire pressure for the trailer or hanger while driving. By puncturing, the driver is alerted in 3 levels: Small puncture, medium puncture and strong puncture. For small and medium punctures the system can complement the tire until it is convenient to repair the damage.

The system pays back the first year alone on tire wear, fuel savings and less downtime.

The system monitors and automatically adjusts the tyre pressure in all affiliated tyres. The axle housing uses an air tank along with a "step-up" pump. This ensures that the adjusted pressure is constant. A warning lamp will flash when the pressure drops. The system has several safety valves.

WITH BEVOGUARD TYRE INFLATION SYSTEM

- Maintenance costs will be reduced.
- Significantly less tyre wear.
- Savings in fuel consumption.
- Less downtime and better comfort.
- Substantially improved security.
