

# SUPPORT BEAM

For Scania trucks

■ Item no. 517300

Scania and BEVOLA have cooperated in manufacturing a support beam for use when tilting the cab on a truck. The support beam is galvanized and the load capacity as well as the item number and the production number are printed on the beam.

TÜV has approved the support beam for 15 Kn provided that it is used correctly.

The support beam is typically applicable in workshops and in cases where an emergency inspection of the rear part of the engine is needed. This beam should be a standard tool for every truck cab.

The support beams are stocked at A/S BEVOLA.
