

# UNO-MATIC

Safety, quality and ergonomics were key focus areas in the development and production of the Uno-Matic couplings. The shape of the handle and rubberised surface give a comfortable, safe grip.

Developed in Sweden specifically for the Nordic climate.

The components are hard anodised, making them very resistant to corrosion.

High standards of quality for the valve packings to achieve long service life and avoid them freezing are demanded.

Art. no.	Model
198500	Uno-Matic BEVOLA truck connector
198501	Uno-Matic BEVOLA nozzle
